

MARTECHADDA STARTUP INTERNSHIP PROGRAM 2026

My Internship Journey

Product Engineering Internship at MarTechAdda

DURATION

6 Weeks

ROLE

Product Engineering Intern

MODE

Remote

Som Bajpai

Certificate issued 05 August 2026 • MarTechAdda, India's Marketing Technology Hub

Where It All Started

A quick look at the company and the role I stepped into

About MarTechAdda

MarTechAdda is India's marketing technology hub — a startup building products at the intersection of marketing and technology. As part of the MarTechAdda Startup Internship Program 2026, I got the chance to work alongside a real product team, not on a simulated project, but on things that actually shipped.

My Role

- Product Engineering Intern for 6 weeks, working remotely
- Sat close to product, design and engineering — not siloed in one corner
- Contributed to real features used by real users, from day one
- Learned to balance speed with quality — a startup rhythm

What I Actually Worked On

Four areas where I spent most of my time and energy

1

Product Development

Helped shape features from idea to working build, thinking about the 'why' before the 'how'.

2

Front-End Engineering

Built and refined the parts of the product people actually click, scroll and interact with.

3

Feature Implementation

Took requirements and turned them into shipped, working functionality inside the product.

4

UI/UX Improvements

Polished flows and screens to make the product feel simpler and more intuitive to use.

What I Learned Along the Way

The skills that grew the most during these six weeks

- **Front-End Development**

Building real, functioning UI — not just prototypes

- **Software Development Practices**

Writing cleaner code and thinking about maintainability

- **UI/UX Thinking**

Designing with the user's experience in mind, not just looks

- **Product Sense**

Understanding why a feature matters before building it

- **Working Remotely, Independently**

Managing my own time and staying accountable

- **Collaborating with a Real Team**

Giving and receiving feedback, and iterating fast

Beyond the Skills — What Really Stayed With Me

The honest, human takeaways from six weeks of building

1

It felt real, not academic

There were no hypothetical assignments here. Every feature I touched was meant to actually go out to users, and that changed how carefully I worked.

2

Small startups move fast

I learned to be comfortable with ambiguity — picking up a task, asking the right questions, and moving without waiting for a perfect brief.

3

Confidence in my own code

By the end, front-end problems that once felt intimidating started to feel like puzzles I knew how to approach.

Grateful for the Six Weeks

Thank you to the MarTechAdda team for trusting me with real work, real feedback, and real ownership. This internship didn't just teach me tools — it taught me how to think and build like a product engineer.
